

Suzhou BangGuan Automation Co., LTD

PRODUCT DESCRIPTION of Pa66 Hammer Injection Packer

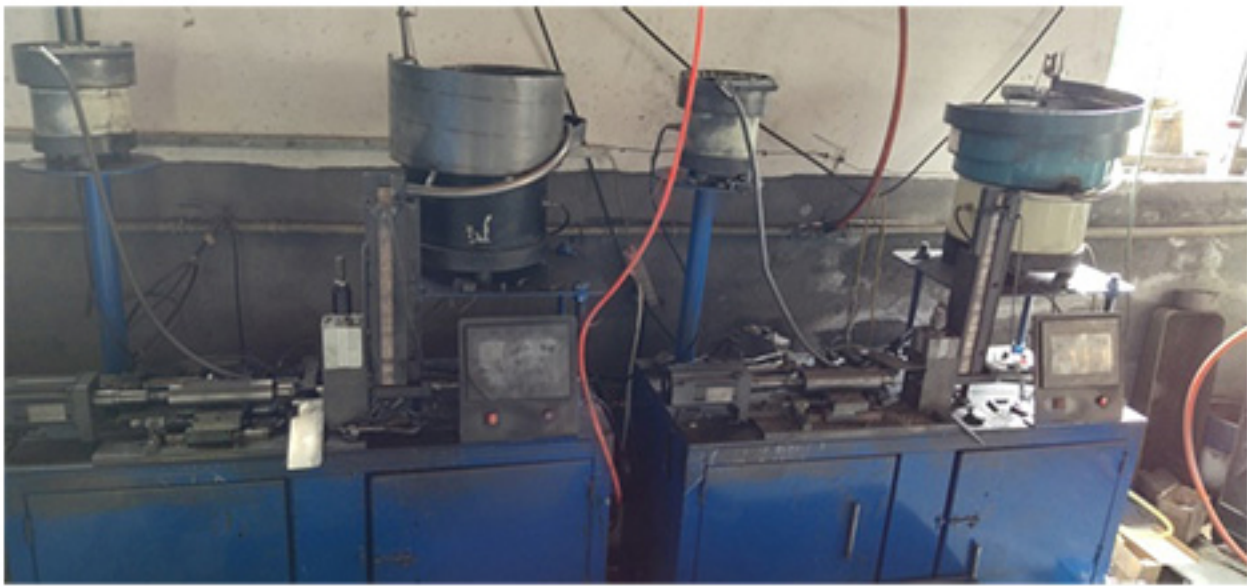

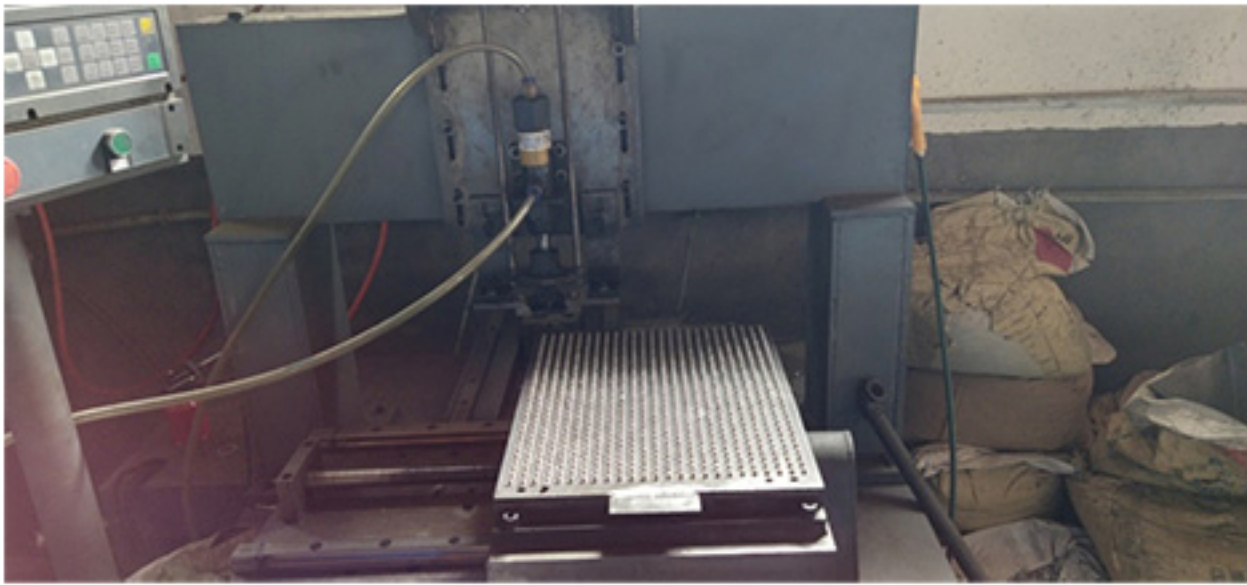

Pa66 Hammer Injection Packer made by PA66 material, drill holes by 10mm driller, fix the packer into the holes by #5 electric hammers. And working pressure not exceeds 200bar.

The use of Pa66 Hammer Injection Packer

The Hammer-In port (Bang in Packer) is 3/8" (10mm) or 1/2" (13mm). The ports are inserted into the drill hole with the tap of a hammer. These packers do away with the sleeve and compression sleeve mechanism as the plastic body of the packer itself creates a compression seal. The packers are set very quickly increasing productivity on the job site. Due to the lower friction fit, injection pressures are limited with this packer type.

Our Factory of Pa66 Hammer Injection Packer:

Our factory has been offering Pa66 Hammer Injection Packer for over 20 years, and we can provide multiple types related products, such as Aluminum Injection Packer, High Pressure Steel Injection Packer, etc. We have strong R & D capabilities and can customize to sample.
